

# Commercial solar street light selection

## Overview

Lights that produce a clean, cold shade of white actually contain many other colors within them. That sterile, fluorescent white contains a high concentration of blue light. The US Department of Energy defines blue light as all light with a wavelength between  $\sim 424$  and  $\sim 500$  nanometers. Also called short wavelength light, the Department of Energy has. You may ask yourself: "How many watts should a street light be?"

" However, when looking to purchase a commercial street light or lighting system, that's not quite the right question. Watts are a measure of power consumption. The relationship of power consumption to overall brightness will vary significantly depending on the type of light you select. Commercial LED street lights last longer than traditional sodium bulbs, often shining bright for up to 50,000 hours of use, or 11 to 15 years (assuming 8 to 12 hours of use per day). Many commercial street lighting systems now offer custom control settings through a smartphone app. Many property owners use this feature to conserve use-hours, saving. Street lights are 9 to 14 feet tall typically. However, commercial street lights used on pedestrian walkways are often shorter. Changing the height of a street light can affect the range the light can cover. For example, if you take two identical street light fixtures and place them at different heights, the taller street light will cast a wider, i.e. The ideal distance between commercial street lights depends on the height of the post. The diameter of the circle the light forms on the ground under the light will roughly equal the height of the light in the air, relative to the ground. If every post has the same height, all posts should have equal distance from one another. If some posts are sho.
