Overview

The vanadium redox battery (VRB), also known as the vanadium flow battery (VFB) or vanadium redox flow battery (VRFB), is a type of rechargeable which employs ions as. The batter. Pissort mentioned the possibility of VRFBs in the 1930s. NASA researchers and Pellegrini and Spaziant followed suit in the 1970s, but neither was successful. presented the first successful. VRFBs' main advantages over other types of battery:

- energy capacity and power capacity are decoupled and can be scaled separately
- energy capacity is obtained from the storage of li.
